Builders of the Open Web

Voice2Proposal

Voice2Proposal is an open-source platform designed to transform spoken intents into structured proposals. This desktop application for Windows systems allows users, known as 'CREATORS', to articulate their visions through voice input, which is then transcribed and processed into detailed execution plans using AI-driven prompts. The platform offers a self-contained, offline workflow that integrates with the OpenAI API to enhance functionality, ensuring users can efficiently convert unstructured ideas into actionable plans while maintaining data privacy through local storage.

Background

In today's fast-paced world, the ability to quickly and efficiently transform ideas into actionable plans is crucial. Many individuals and businesses struggle with converting unstructured verbal inputs into organized proposals. Voice2Proposal addresses this challenge by providing a platform that captures spoken intents, asks clarifying questions, and transforms these inputs into structured artifacts like requirements, stakeholders, phases, epics, stories, and tasks. By leveraging AI technology and operating on a local Windows system, this platform offers a unique solution for proposal creation without the need for constant online connectivity.

Date: 2026-01-16

The World

Enable users to input spoken intents and transform them into structured proposals.

Builders of the Open Web

Distributed, borderless, and P2P

Provide a user-friendly voice intake UI for live transcription and editing.

hello@theworld.network

Proposal ID: S2024017

Integrate with the OpenAI API for AI-driven assistance in capturing and processing user intents.

0000000000

Ensure data privacy and security by storing all information locally on the user's system.

Offer a self-contained offline workflow that guides users from voice input to structured proposal outputs.

Scope

The scope of Voice2Proposal includes developing a local desktop application for Windows systems that allows users to input spoken intents and transform them into structured proposals. Key features include a voice intake UI, API key onboarding, conversational requirements capture, pipeline transforms from intent to structure, and local storage of outputs and artifacts. The project focuses on creating a user-friendly, secure, and efficient platform for proposal creation, with integration limited to the OpenAI API. The system is designed to operate offline, ensuring data privacy and security.

Deliverables

A local desktop application for Windows systems with a voice intake UI.

Integration with the OpenAI API for AI-driven prompts and assistance.

A self-contained offline workflow for capturing and processing user intents.

Voice Intake UI Development **Voice2Proposal**

Builders of the Open Web

Distributed, borderless, and P2P

hello@theworld.network

Implement a voice intake UI that allows users to speak their vision.

0000000000

Ensure live transcription of audio into an editable text area.

Provide functionality for users to stop, edit, and submit responses.

API Key Onboarding and Integration

Create a UI path for obtaining and storing an OpenAI API key locally.

Integrate with the OpenAI API for AI-driven prompts and assistance.

Implement a red/green state indicator for API key presence.

Ensure secure handling of API keys within the local system.

Conversational Requirements Capture and Processing

Develop a system for AI-driven clarifying questions to gather user requirements.

Store user responses in a local conversation log.

Implement a pipeline to transform intents into structured artifacts (Vision → Requirements → Stakeholders/Phases → Epics → Stories → Tasks).

Score tasks for complexity and effort.

Output and Artifact Management

Store JSON artifacts and proposal drafts locally.

Provide optional exports to PDF/Excel.

Develop a user-friendly interface for reviewing and editing intermediate artifacts.

hello@theworld.network

Proposal ID: S2024017

Implement robust error handling and fallback mechanisms to manage API call failures.

0000000000

Regularly monitor OpenAI API updates and adjust the integration as necessary.

Consider caching responses or creating a local fallback model to use in case of API unavailability.

Security risks associated with storing sensitive information like API keys and proposal data locally without encryption.

Implement encryption for all sensitive data stored locally to protect against unauthorized access.

Use secure methods for API key storage, such as encrypted vaults or secure key management solutions.

Conduct regular security audits to identify and mitigate potential vulnerabilities.

Performance issues related to real-time transcription and AI-driven prompts may lead to delays or reduced user experience.

Optimize the software for performance by using efficient algorithms and data structures.

Conduct performance testing to identify bottlenecks and areas for improvement.

Ensure the hardware requirements are clearly communicated to users to ensure compatibility and optimal performance.

environments tailored to the unique needs of our clients. By integrating artificial intelligence into core business processes, we deliver systems that not only reduce manual effort but also significantly increase accuracy and decision-making speed. Our commitment to innovation and excellence empowers businesses to achieve sustainable growth and maintain a competitive edge in their respective markets.

Relevant Experience

Myte Group has extensively optimized various internal operations through customized AI-driven solutions, particularly in sales, marketing, outreach, estimation, planning, and research. This expertise reflects our ability to enhance process efficiencies and accuracy, thereby improving time management and resource allocation across departments. Our strategic implementations of AI have significantly streamlined these key business functions, demonstrating our capability to elevate organizational performance and drive substantial growth through innovation in AI technology.

Team Expertise

Under the leadership of Ahmed Mekallach, Myte Group boasts a profound expertise uniquely blending business acumen with technical prowess. With over eight years of experience in sales, estimating, and project management, Ahmed's comprehensive understanding of business processes and keen coding skills enable him to tackle challenges efficiently and innovatively. His approach not only ensures operational excellence but also drives the development of AI-driven

solutions that are both sophisticated and practical, perfectly suited to meet the
